Additional services:

- insurance;
- consulting;
- customs clearance / transit;
- consolidation / de-consolidation;
- storage at TSW and customs warehouse.

Dangerous goods transportation: specialists of transport and logistic centre have got IATA DG Transportation Certificates.

Useful information:

Stowing dimensions:

Thanks to modern equipment, the TLC of RUE "National Airport Minsk" can do the handling of air cargo items with weight up to 7 tons per item as well as heavy cargos with weight up to 8 tons per item arriving by road.

In case of heavy cargo transportation, please contact in advance to specify the dimensions of the cargo.

How ship the cargo:

To ship the cargo you should either fill in the application form or contact our specialist.

How calculate the transportation cost:

The transportation cost depends on type of cargo, its weight, flight route, urgency, etc. As a rule, the cost of transportation can be calculated as follows:
cost = tariff per 1kg of paid weight * X kg + additional charges (security charge, fuel charge, charge for AWB execution, special charges).

* paid weight – either gross weight or volume weight depending on what weight is greater. The volume weight is calculated according to IATA rules 1:6, (i.e. cargo with volume 1 m³ shall be paid for as for not less than 167 kg).
